

STEP 4. Check if there is a reason to delay ART

Aim to start same day but first check if there is a reason to delay ART:

If any of: difficulty breathing, respiratory rate ≥ 30 , temperature $\geq 38^{\circ}\text{C}$, pulse > 100 , BP $< 90/60$, confusion or agitation, or unable to walk unaided, delay starting ART and refer same day.

STEP 5. Dose ART correctly according to chart →116.

¹If patient has TB and cryptococcal meningitis, discuss with experienced ART clinician about when to start ART.
