

ABNORMAL VAGINAL DISCHARGE

Abnormal vaginal discharges are itchy or different in colour/smell. First assess and advise the patient with an abnormal vaginal discharge → 49.

Approach to a woman with an abnormal vaginal discharge

Has patient been sexually active in the last 3 months?

¹If severe penicillin allergy (previous angioedema, anaphylaxis or urticaria), omit ceftriaxone and increase **azithromycin** dose to 2g. ²For ceftriaxone 250mg IM injection: dissolve 250mg in 0.9mL **lidocaine 1%** without epinephrine. ³Advise no alcohol until 24 hours after last dose of metronidazole. ⁴Do not mix Ringer's lactate and IV ceftriaxone. Flush IV line with **sodium chloride 0.9%** before and after IV ceftriaxone. ⁵Avoid if peptic ulcer, asthma, hypertension, heart failure or kidney disease.
